The Government has just published a report initially kept secret - Their description is: ***"This assessment is an analysis of how global biodiversity loss and ecosystem collapse could affect UK national security.***

It shows how environmental degradation can disrupt food, water, health and supply chains, and trigger wider geopolitical instability. It identifies six ecosystems of strategic importance for the UK and explores how their decline could drive cascading global impacts.

This assessment, which was developed by analysts and experts across HM Government, supports long-term resilience planning."

A blog post on the previously suppressed Government report on ecosystem collapse and the threat to national security. It is all a bit 'Don't Look Up'!

<https://selfpropelled.life/2026/01/20/dont-look-up-when-the-government-finally-admits-the-planet-is-breaking/>
